DETAILED ACTION

Election/Restrictions

1. Applicant's election without traverse of the product claims in the reply filed on July 14, 2006 is acknowledged.

Drawings

2. Figure 9 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Specification

3. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed. The title should include at least one technical, or inventive, feature of the claimed instant invention.

Claim Rejections - 35 USC § 112

4. Claims 1-22 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The structure of the lid is insufficiently set forth in the claims. For instance, only a perimeter is set forth in claim 1. There is no structural relationship between the lid perimeter of claim 1 and the projections in claim 18. Additionally, it appears the projections securing the lid to a container contradicts the engagement between the lid perimeter and container of claim 1.

Application/Control Number: 10/815,324

Art Unit: 3727

Regarding claim 18, the phrase "such as" renders the claim indefinite because it is unclear whether the limitations following the phrase are part of the claimed invention. See MPEP § 2173.05(d).

Regarding claims 18 and 21, the phrase "or the like" renders the claim(s) indefinite because the claim(s) include(s) elements not actually disclosed (those encompassed by "or the like"), thereby rendering the scope of the claim(s) unascertainable. See MPEP § 2173.05(d).

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 6. Claims 1-3,6-8,11,20, and 21 are rejected under 35 U.S.C. 102(e) as being anticipated by Helms, Jr. (US 6,845,876). Lid **10** is seen in figures 5 to be capable of having its perimeter shortened and lengthened.

With respect to claim 3, member **18** is the deformable portion forming part of planar surface **16**.

With respect to claims 6-8, the valve 7 serves as the catch.

With respect to claim 14, the resilient seal is member 18.

7. Claims 1,2,6,11-13,20 and 21 are rejected under 35 U.S.C. 102(b) as being anticipated by Chen (US 4,968,197). Vertical actuation of rod **12** may reduce the perimeter of the lid.

- 8. Claims 22, 24, and 25 are rejected under 35 U.S.C. 102(b) as being anticipated by Schellenbach (US 5,447,674). Lid **3** has seal **6**. Injection point is centrally located (see fig. 1).
- 9. Claims 1-3,5-9,11 are rejected under 35 U.S.C. 102(b) as being anticipated by Sarafinas (US 3,131,825). Regarding claims 6 and 7, the locking member is element **7** and the catch is element **10**. Claim 5 is a product-by-process claim and does not further structurally limit the claimed lid.
- 10. Claims 1-8,10,11,14,15,17, and 19-21 are rejected under 35 U.S.C. 102(b) as being anticipated by Harschel (US 3,640,422). See figures 3 and 4 and the description of the lid in the specification.
- 11. Claims 22-25 are rejected under 35 U.S.C. 102(b) as being anticipated by Haug (DE 42 06 244). Lid 10 comprises a body 15, a seal 12, and an elastomeric deformable portion 13 and 14 for removable of the lid from a container.
- 12. Claims 1-4,6-11,14, and 16-21 are rejected under 35 U.S.C. 102(b) as being anticipated by Underwood (US 4,358,024). See the embodiment illustrated in figure 4-7. Whereas the actuator can be gripped in more than one location, it comprises finger grips (to the degree finger grips are set forth in the claim).

Application/Control Number: 10/815,324 Page 5

Art Unit: 3727

Claim Rejections - 35 USC § 103

13. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

14. Claim 10 is rejected under 35 U.S.C. 103(a) as being unpatentable over Helms.

Helms discloses the claimed invention except is silent regarding the use of polypropylene for the lid. It would have been obvious to one having ordinary skill in the art at the time the invention was made to form the lid of polypropylene, since it has been held to be within the general skill of a worker in the art to select a known material on the basis of its suitability for the intended use as a matter of obvious design choice. Doing so would provide a durable plastic material less susceptible to corrosion than a metal lid.

15. Claim 10 is rejected under 35 U.S.C. 103(a) as being unpatentable over Sarafinas.

Sarafinas discloses the claimed invention except is silent regarding the use of polypropylene for the lid. It would have been obvious to one having ordinary skill in the art at the time the invention was made to form the lid of polypropylene, since it has been held to be within the general skill of a worker in the art to select a known material on the basis of its suitability for the intended use as a matter of obvious design choice. Doing so would provide a durable plastic material less susceptible to corrosion than a metal lid.

16. Claim 4 is rejected under 35 U.S.C. 103(a) as being unpatentable over Sarafinas in view of Harschel (US (US 3,640,422).

Sarafinas teaches the claimed lid except for a plurality of finger grips.

Harschel teaches it is known to provide a lid with finger grips for manipulating a lid.

It would have been obvious to one of ordinary skill in the art at the time the invention was made to apply the teaching of finger grips to the lid of Sarafinas. Doing so allows for easy manual manipulation of the lid without tools.

17. Claim 12 is rejected under 35 U.S.C. 103(a) as being unpatentable over Sarafinas or Harschel or Chen or Underwood or Helms.

The prior art references are silent regarding the size of the lid.

It would have been an obvious matter of design choice to form the lid of Sarafinas or Harschel or Chen or Underwood or Helms with a diameter less than 250mm, since such a modification would have involved a mere change in the size of a component. A change in size is generally recognized as being within the level of ordinary skill in the art.

Conclusion

- 18. Applicant is duly reminded that a complete response must satisfy the requirements of 37 C.F.R. 1.111, including: "The reply must present arguments pointing out the specific distinctions believed to render the claims, including any newly presented claims, patentable over any applied references. A general allegation that the claims "define a patentable invention" without specifically pointing out how the language of the claims patentably distinguishes them from the references does not comply with the requirements of this section. Moreover, "The prompt development of a clear Issue requires that the replies of the applicant meet the objections to and rejections of the claims." Applicant should also specifically point out the support for any amendments made to the disclosure. See MPEP 2163.06 II(A), MPEP 2163.06 and MPEP 714.02. The "disclosure" includes the claims, the specification and the drawings.
- 19. The prior art made of record and not relied upon is considered pertinent to applicant's

Application/Control Number: 10/815,324

Art Unit: 3727

disclosure. Various prior art closures teaching features similar to those disclosed and/or claimed are cited for their disclosures.

- 20. In order to reduce pendency and avoid potential delays, Group 3720 is encouraging FAXing of responses to Office Actions directly into the Group at (571) 273-8300. This practice may be used for filing papers not requiring a fee. It may also be used for filing papers which require a fee by applicants who authorize charges to a PTO deposit account. Please identify the examiner and art unit at the top of your cover sheet. Papers submitted via FAX into Group 3720 will be promptly forwarded to the examiner.
- 21. It is called to applicant's attention that if a communication is faxed before the reply time has expired, applicant may submit the reply with a "Certificate of Facsimile" which merely asserts that the reply is being faxed on a given date. So faxed, before the period for reply has expired, the reply may be considered timely. A suggested format for a certificate follows:

The L	I hereby certify that this correspondence for Application Serial No is being facsimiled to J.S. Patent and Trademark Office via fax number 571-273-8300 on the date shown below:	to					
	Typed or printed name of person signing this certificate						
•	Signature						
	Date						

22. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Robin Hylton whose telephone number is (571) 272-4540. The examiner can normally be reached Monday - Friday from 9:00 a.m. to 4:00 p.m. (Eastern time).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Nathan Newhouse, can be reached on (571) 272-4544.

Any inquiry of a general nature or relating to the status of this application or proceeding may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR

Art Unit: 3727

CANADA) or 571-272-1000.
